comfyui. looking for an image compare ... has a sllider that goes back and forth left right

⬡   Show thinking ⌄

That sounds like the **Image Comparer** node!

This is a custom node that is extremely popular for visually comparing two images side-by-side with an interactive slider. It's often used to check differences between upscales, inpainting results, or various iterations of an image.

You can typically find this node as part of a custom node pack, with two of the most well-known versions being:

1. **Image Comparer (rgthree):** Part of the widely used `rgthree-comfy` custom node suite. This version usually defaults to the "Slide" mode you are describing.

2. **SimpleImageCompare** or **Image Compare (Slider):** You might also find versions with similar names from other custom node packs like `Comfyroll Studio` or `ComfyUI-Image-Compare`.

🛠️**How to Find and Use It**

1. **Install a Custom Node Manager:** The easiest way to get these nodes is by first installing the **ComfyUI Manager** custom node.

2. **Install the Node Pack:** Use the ComfyUI Manager to search for and install a package like `rgthree-comfy`.

3. **Add the Node:** After restarting ComfyUI, double-click on an empty space in your workflow and search for `Image Comparer`
